Comments

Patient was accompanied by S.P.D. patrol officer Angela Abar (badge number SPD28041970) who had taken an interest in his welfare. Patient was found by Officer Abar on 12/19 wandering Bom Laird Plaza in "confused" state with "minor contusion" on forehead (no longer visible), suggesting an accident of some nature. (Area has high rate of vehicular/bicycle collisions.) Patient initially refused officer Abar's requests to seek medical treatment. Officer Abar reports she conducted a background check and obtained some medical history and biographical data from previous employer, Pyramid Global Construction. Patient finally agreed to consult a physician when memory issues failed to improve. Patient - new to Vietnam (arrived a mos. ago for work); unemployed since April - presents with several acute symptoms associated with dissociative fugue. No recall. Identity loss. Language issues. (Officer Abar did most of talking.)

Recommendation / Prescription

Recommended MRI to rule out brain damage and Alzheimer's (given family history); patient declined, citing no insurance. (Officer Abar took responsibility for the doctor's visit.) Recommended counseling and hypnotherapy

Misc. Notes

Patient uncommonly passive and quiet. Polite and composed - unusual for fugue patients. Took great interest in my Dr. Manhattan bobblehead.
